Creating a new AIRNow Drupal Web Page

INTRODUCTION

This is a procedure on how to set up a new "Web Page" in the AIRNow Drupal website hosted on the Acquia cloud. You'll need to create a Band and a Band container. Band containers allow you to group and organize bands; the actual HTML content is in the Band. The Band Container references the Band, so we'll need to create the Band first, then go back and fill it with HTML content.

<title> means insert the Title required for the given page you are creating.

Big Picture:
1. Make a Band.
2. Place page content in the Band.
3. Make a Band Container

PROCEDURE

Make a Band
1. Select the Content tab
2. Click on Add Content. This will display the available content types.
3. Click on Band. This add a new Band. Use the following values in the form
   3.1. Tile = <title> Band
   3.2. Band Associated View = asthma test for now
   3.3. Leave Options alone for now
   3.4. Set Band type menu to Content
   3.5. Viewable Band Title = <title to appear on the page>
   3.6. Deselect the checkbox for Show Back To Top
   3.7. Anchor Tag = <lower case hyphenated single string of Viewable Band Title>
   3.8. Click Add Content
       1.1.1. Anchor ID = <string from 3.7 plus -<a number>
       1.1.2. Content body = <the HTML of the Page> or at least a start on it.
   6.9 Click Save

Make a Band Container
4. Select the Content tab
5. Click on Add Content. This will display the available content types.
6. Click on Band Container. This add a new Band Container. Use the following values in the form
   6.1. Title = <title> Band Container
   6.2. Band Container Associated View = asthma test for now
   6.3. Display Id. Select Page
   6.4. Open Options by clicking the twisty arrow. Argument = blank for now
   6.5. Band Container Display = Default (66)
   6.6. Band References Section. Click Add Item. Select <title> Band from 3.1
   6.7. On Right hand side, Open URL PATH SETTINGS by clicking the twisty arrow. URL alias = <lower case hyphenated single string of path through the menu system to this page>
       EX: /education/air-quality-flag-program
7. Click Save.

Place **page content in the Band**
12. If necessary, Go back to the Band and the Content Body field to modify and complete the HTML content of the page. See 3.8.
